

**Course Description**

Reliability is a product or system's capacity to perform as intended, without failure and within specified performance limits, for a specified time in its life-cycle conditions. Knowledge of reliability concepts and principles, as well as risk assessment, mitigation, and management strategies prepares engineers to contribute effectively to product development and life-cycle management and product safety.

This course teaches the fundamental knowledge and skills of reliability as it pertains to the design, manufacturing, and use of engineered products and systems. Specifically, students will learn how to:

- Efficiently and cost-effectively design and manufacture reliable products
- Implement derating, uprating, reliability prediction, and reliability allocation
- Plan and implement product testing to assess and achieve reliability
- Assess the suitability of the supply chain members to contribute the development, manufacturing, distribution, and support of reliable products
- Understand process capability and process control
- Apply design and analysis tools such as failure modes, mechanisms, and effects analysis, fault tree analysis, design of experiment; and others
- Analyze degradation, failure, and warranty return data to estimate fundamental reliability parameters
- Conduct root cause analysis
- Design prognostics and health monitoring tools for products and systems
- Address reliability issues associated with warranties, regulatory requirements, and liabilities

Expectations of Students

- **Attendance:** Attending all classes generally leads to good grades. Except for emergencies, late assignments will not be accepted for credit.
- **Communication Style:** Ask questions whenever they occur to you. Email communication through the class web page is also encouraged.
- **Academic Integrity:** The University of Maryland, College Park, has a nationally recognized Code of Academic Integrity, administered by the Student Honor Council. This Code sets standards for academic integrity at Maryland for all undergraduate and graduate students. As a student, you are responsible for upholding these standards for this course. It is very important for you to be aware of the consequences of cheating, fabrication, facilitation, and plagiarism. For more information on the Code of Academic Integrity or the Student Honor Council, please visit <http://shc.umd.edu/SHC/Default.aspx>.

Homework

Both individual and group homework will be assigned. Some of the homework assignments will require use of software tools for which semester-long licenses will be provided. The homework submissions are expected to meet the standard of professional report. All homework submissions will be online using the course website.

Professor Michael Pecht

Tel.: (301) 405-5323
pecht@calce.umd.edu

Class Meets

Monday
09:30AM – 12:10PM
(US Eastern)
J.M. Patterson Building
#083, Room 2217

Office Hours

Tuesdays and Thursdays
9:30AM – 11:30AM (US
Eastern)
Engineering Lab
Building #089,
Room 1100

Teaching Staff

Dr. Rajkumar B. Patil
rbpatil@umd.edu

Prerequisites

Graduate standing
expected

Course Communication

You are welcome to drop by the office anytime. Calling or emailing in advance is suggested to ensure availability. Questions raised due to skipping of class should be avoided.

**Grading Process**

- Mid-term exam¹: 20%
- Final exam²: 50%
- Project: 30%
- Homework: 5 points ++

Course Website

All registered students will have access to the course website. Please visit <https://myelms.umd.edu/login> for instructions on how to obtain a login/password.

Papers and Research Documents

Papers and research documents will be posted in class web site and will be required reading.

Software

Semester-long licenses are provided for failure data analysis, system reliability and fault tree analysis, and accelerated test data analysis tools.

- Proceedings of Institute of Engineers Part O: Journal of Risk and Reliability

¹ Students will take the mid-term exam from 9:30 AM to 10:45 AM on March 09, 2020.

² The University of Maryland decides the date and time of the two-hour final exam, which is announced on <http://testudo.umd.edu> by the middle of the semester. The date of the final exam will be between May 14, 2020 and May 20, 2020.

Class Schedule

This will also be posted separately in the course website and updated there if needed.

Class	Class Dates	Lecture Topics	Reading Materials (Textbook Chapters)
1	01/27	<ul style="list-style-type: none"> Reliability engineering in the twenty-first century – what is important and what is very important Software for reliability data analysis – Weibull++ 	Chapter 1 Chapter 2 Chapter 3
2	02/03	<ul style="list-style-type: none"> Reliability concepts [include paper clip test data utilization] Continuous probability distribution [include data analysis mini-project assignment] Reliability and life distributions for reliability analysis – Discrete probability distributions 	Chapter 2 Chapter 3
3	02/10	<ul style="list-style-type: none"> Confidence interval concepts System reliability modeling Software for system reliability modeling – BlockSim 	Chapter 13 Chapter 17
4	02/17	<ul style="list-style-type: none"> Markov chain and state space models Fault tree analysis Software for fault tree analysis 	Chapter 5
5	02/24	<ul style="list-style-type: none"> How to meet reliability objectives Product requirements, constraints, and specifications Life cycle conditions 	Chapter 5 Chapter 6 Chapter 7
6	03/02	<ul style="list-style-type: none"> Reliability capability Parts selection and management 	Chapter 8 Chapter 9
7	03/09	<ul style="list-style-type: none"> 75-min mid-term exam (covering lectures 1-6) Design of experiments 	Chapter 5
	03/16	<ul style="list-style-type: none"> Spring break 	
8	03/23	<ul style="list-style-type: none"> Failure modes, mechanisms, and effects analysis Probabilistic design for reliability and factor of safety 	Chapter 10 Chapter 11
9	03/30	<ul style="list-style-type: none"> Derating Role of quality assurance in reliability and safety 	Chapter 12
10	04/06	<ul style="list-style-type: none"> Product qualification and accelerated testing (Including MIL-STD-781A) Software for test data analysis – ALTA 	Chapter 13
11	04/13	<ul style="list-style-type: none"> Process capability and statistical process control Product screening and burn-in 	Chapter 14 Chapter 15
12	04/20	<ul style="list-style-type: none"> Analyzing product failures and root causes Change and change notification 	Chapter 16 Chapter 18
13	04/27	<ul style="list-style-type: none"> Health monitoring and prognostics 	Chapter 18
14	05/04	<ul style="list-style-type: none"> Availability concepts Sustainment – logistics, spares, maintenance, and contracts 	
15	05/11	<ul style="list-style-type: none"> Risk-based operation management and common cause failures Warranty planning and analysis 	Chapter 19
	May 14-20	<ul style="list-style-type: none"> Final exam: between May 14, 2020 and May 20, 2020 (On the material covered after the mid-term but retention of the information and understanding of all chapters are expected) 	

Note: This is a tentative schedule, and subject to change as necessary – monitor the course ELMS page for current deadlines. In the unlikely event of a prolonged university closing, or an extended absence from the university, adjustments to the course schedule, deadlines, and assignments will be made based on the duration of the closing and the specific dates missed.
